DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/13/2006 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over US patent 5967489, Nakazawa et al in view of US patent 5058935, Eidsmore.

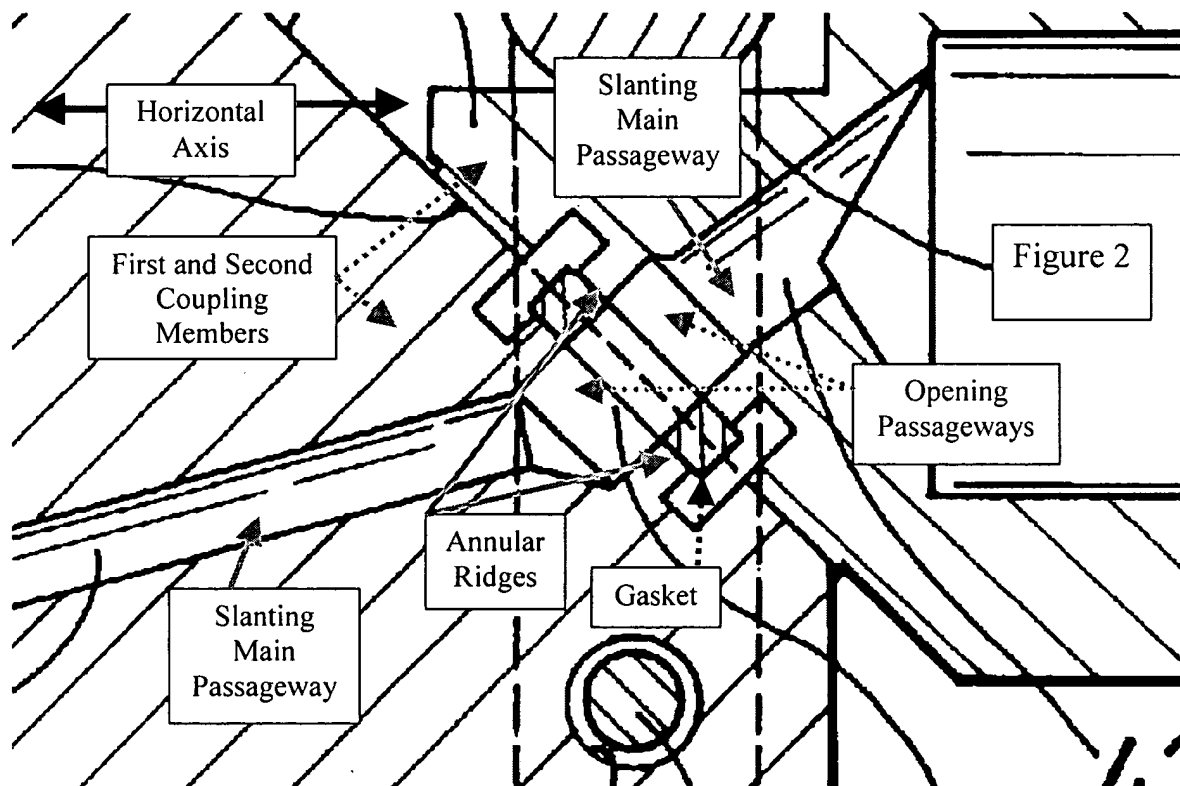

In regards to claim 1, in figure 2 below, Nakazawa et al discloses a fluid coupling comprising first and second coupling members having respective gasket holding annular ridges on butting end faces thereof; and

an annular gasket interposed between the first and second coupling members, wherein each coupling member has a fluid channel comprising an opening passageway orthogonal to the butting end face thereof, and a slanting main passageway

Art Unit: 3679

communicating therewith, the opening passageway having a diameter equal to the inside diameter of the gasket holding annular ridge, and

the gasket holding annular ridges are in contact with the gasket at its radial midportion so as (capable) to relieve the inner peripheral portion of the gasket from stress concentration and wrinkles.

Nakazawa et al does not disclose the gasket holding annular ridges being rounded as to be in contact with flat, non-inclined faces of the gasket only at its radial midpoint. In Figure 5, Eidsmore teaches a gasket holding annular ridges (40) being rounded as to be in contact with flat, non-inclined faces of the gasket (42) only at its radial midpoint because this a relatively conventional arrangement well known in the art (col. 4, lines 24-26). As Eidsmore relates to pipe joints employing a metal gasket, it would have been

obvious to one having ordinary skill in the art the time the invention was made to fabricate rounded gasket holding annular ridges as to be in contact with flat, non-inclined faces of the gasket only at its radial midpoint because this a relatively conventional arrangement well known in the art, as taught by Eidsmore.

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
